

Chainlytics × Vanish

SIGNAL-TO-SILENT-EXECUTION

Chainlytics detects the buy signal. Vanish executes the trade.
Your wallet never signed a thing.

- TOON SCHEMA
- 5-GATE SAFETY
- JITO BUNDLES
- <200MS

The Bottleneck

Nobody Talks About

STALENESS

2–15s

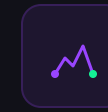

Delays on public RPC nodes. A token moves **30–50%** in that window. Your bot buys prices that no longer exist.

NOISE FLOOR

>95%

Of tokens are spam or rugs. Every signal is contaminated. Like receiving **50 radio stations at once**.

ORCHESTRATION TAX

5–8×

API calls per token decision. **1,300–2,000ms** total latency. In a market that moves every second, unacceptable.

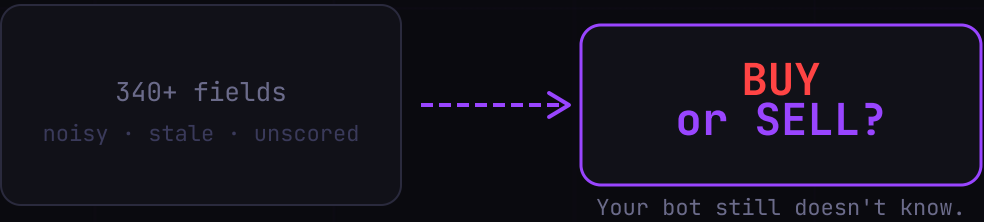

In Solana, 15 seconds is not annoying. It is catastrophic.

340+ Fields. Zero Decisions.

RAW API RESPONSE — TOKEN INTELLIGENCE PROVIDER

```
"mint_address": "So11...1112",
"decimals": 9,
"supply": 999997715,
"price_usd": 143.21,
"market_cap_usd": 61843214992,
"liquidity_usd": 38214830,
"holder_count": 1492831,
"top10_holder_pct": 0.1832,
"lp_locked": true,
"honeypot_risk": "UNKNOWN",
"wash_score": null,
"rug_ratio": null,
"open_source": true,
"authority_renounced": null,
... 327 more fields ...
```

Your bot still doesn't know: BUY or SELL?

- × **Multiple providers** — 3 schemas, 3 failure points, compounded latency
- × **Build your own indexer** — 6–18 months, \$50K/mo infra
- × **Traditional APIs** — 200–400 raw fields, not designed for AI agents

One API Call. **Six Fields.** Immediate Signal.

● ● ● POST /v1/score – T00N Response

POST /v1/score

```
{
  "token_address": "7xKX...mR2q",
  "chain": "sol"
}
```

// Aggregates 340+ fields from:

Pump.fun · letsbonk · fourmeme · clanker
OHLCV 1m-1d · Smart Money · KOL signals
Holder profiling · Rug & wash detection
Honeypot check · Bonding curve status

RESPONSE <200MS

```
{
  "decision_score": 7.84, ← above 7.0 = strong buy
  "action": "BUY_SCALED",
  "confidence": 0.91,
  "insider_risk": "LOW",
  "regime": "STABLE",
  "ttl_s": 180
}
```

340+ raw fields → 6 structured signals. No normalization. No multi-provider orchestration. AI-native from day one. Reduces LLM prompt token usage by **98%+**.

<200ms
RESPONSE TIME

Three Data Domains. One Scored Output.

DOMAIN 01

Real-Time Chain Scanning

- New token discovery — Pump.fun, letsbonk, fourmeme, clanker
- Trending rankings by volume, smart money count, market cap
- OHLCV at 1m, 5m, 15m, 1h, 4h, 1d granularity
- KOL and Smart Money entry signals — live

DOMAIN 02

Token Analytics

- Honeypot detection — hard gate, simulation-based
- Rug ratio score (0–1), wash trading detector
- Holder profiling: Smart Money, bundler, sniper, whale, rat trader
- Bonding curve status and LP pool details

DOMAIN 03

Wallet Intelligence

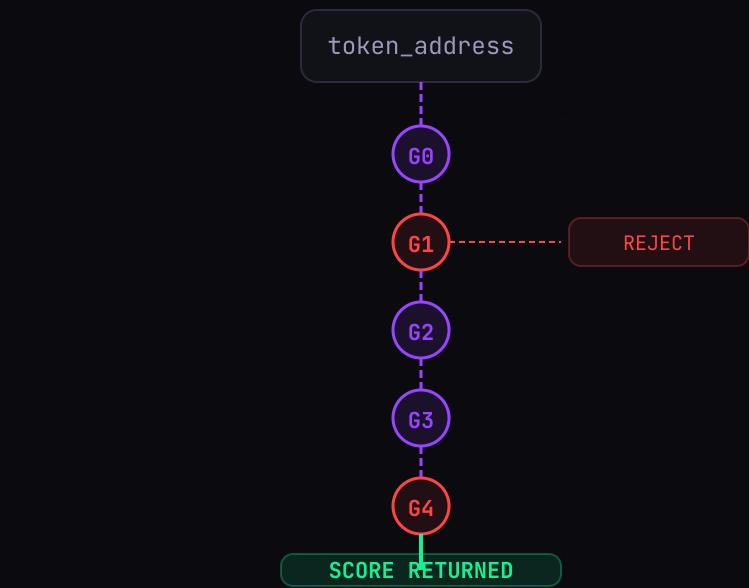

- Real-time P&L — realized and unrealized
- Win rate, trade style, behavioral classification
- Smart Money buy/sell tracking — live
- KOL wallet monitoring across all addresses

TOON SCHEMA

Chainlytics' proprietary scoring algorithm reduces all of this into the **Token-Oriented Object Notation** — the first AI-native token intelligence format designed for machine consumption, not human dashboards.

No Dangerous Token Passes Through

Gate 0	Liquidity & Market Cap Floor Minimum depth and cap thresholds — enforced before scoring begins ● PASS → CONTINUE
Gate 1	Honeypot Detection Simulation-based — if triggered, pipeline halts immediately ● FAIL → HARD STOP
Gate 2	Volume & Swap Activity Minimum Real volume validated against thresholds — confirms market interest ● PASS → CONTINUE
Gate 3	Wash Trading Detector Statistical analysis of swap patterns to identify artificial inflation ● PASS → CONTINUE
Gate 4	Rug Pull Signal Rug risk score monitored continuously — overrides any BUY to SELL ● TRIGGERED → SELL OVERRIDE

All five gates run **before the score is returned**.
A BUY signal from Chainlytics means the token
cleared every filter. No exceptions.

Private Execution. Zero Trace.

- 1

Chainlytics fires BUY_SCALED signal

Score 8.4 · Confidence 91% · Insider Risk: LOW
- 2

GET /trade/one-time-wallet

Fresh disposable Solana address — never reused
- 3

Jupiter /v6/quote + /v6/swap

Unsigned transaction, signer = one-time wallet (not your wallet)
- 4

POST Vanish /trade/create

Vanish signs with the one-time wallet's private key via Ed25519
- 5

Jito bundle submission

MEV-protected routing → ~200ms to settlement
- 6

POST /commit → status: completed

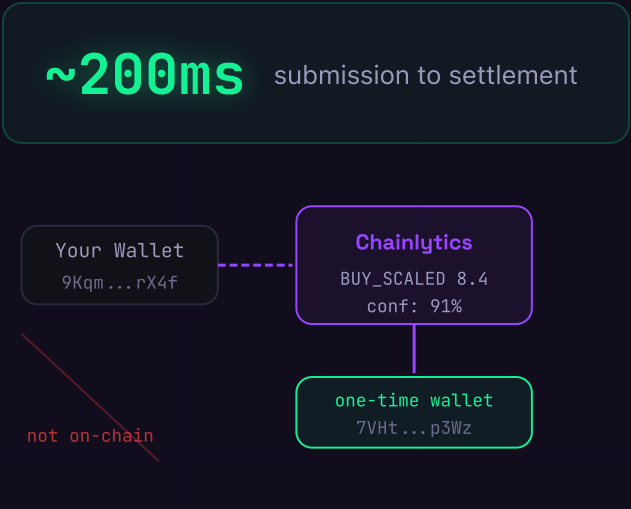

Polled until terminal. Compliant via Elliptic + Range screening.
- 7

Solscan link appears in dashboard

Click it — user wallet is not present.

PRIVACY GUARANTEE

The **user wallet appears nowhere** in the transaction. The one-time wallet is discarded after one use. It will never be reused.

Click the Link. The Proof Is On-Chain.

PROGRAM

Jupiter Aggregator v6

STATUS

Success ✓

BLOCK

324,891,042

The intelligence was real.
The execution was **private**.
The connection between analyst
and actor is **invisible**.

68%

less copy-trade inflow in the first 60 seconds following a buy, compared to standard smart-money wallets executing on-chain directly.

Neither Layer Alone Is Enough

VANISH WITHOUT SIGNAL

Private. Blind.

→

You execute privately. You are guessing what to buy. Privacy means nothing without an edge.

?

SIGNAL WITHOUT VANISH

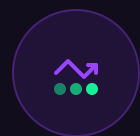

Informed. Exposed.

→

You know what to buy. You broadcast your strategy to every MEV searcher watching the mempool. Copy-trading bots clone your position immediately.

THE CLOSED LOOP

Chainlytics + Vanish

Scored signal flows directly into private execution. The intelligence is real. The execution is invisible. **No existing product offers both layers integrated.**

Already Tiered. Clear Upgrade Path.

TIER	PRICE	WHAT YOU GET
FREE	\$0 / mo	Token intelligence — explore the platform. No credit card.
STARTER	\$49 / mo	Wallet analytics, holder profiling, portfolio tracking
PRO THIS INTEGRATION	\$99 / mo	Full TOON score, 5-gate pipeline, trading simulator. 200K req/day.
ENTERPRISE	Custom	Dedicated infra, SLAs, negotiated limits, cross-chain aggregation

\$180B+

daily DEX volume on Solana

17K+

AI agents active in DeFi since 2025

500K+

tokens launched on Solana in 2024

The Signal Is Real. The Execution Is Silent.

- Chainlytics **detects** the signal.
- Vanish **executes** invisibly.
- Your wallet **never signed a thing**.
